

UPGRADING SOFTWARE ON SMARTDIRECTOR

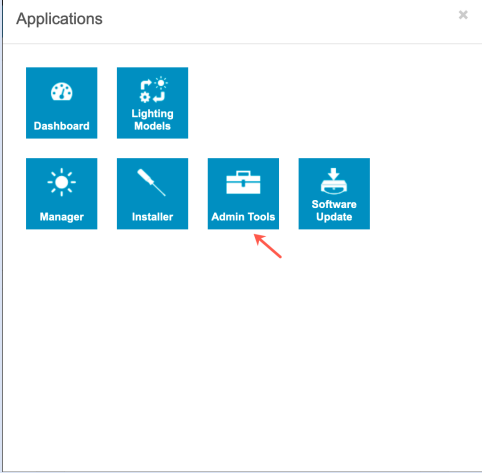

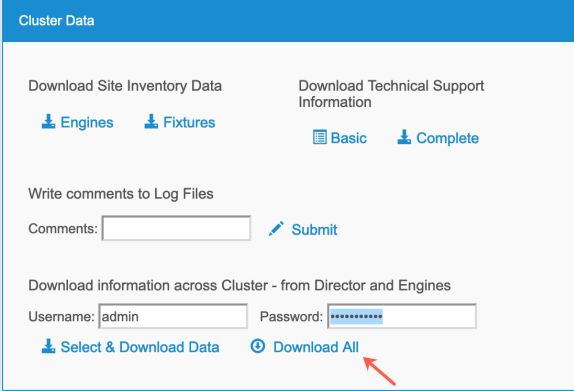

INTRODUCTION	3
PRE-REQUISITES	3
UPGRADING SOFTWARE ON THE SMARTDIRECTOR	5

INTRODUCTION

The smartdirector Management software allows a user an easy way to upgrade the software version on the system.

PRE-REQUISITES

Prior to performing any software upgrades, it is a **best practice** (and highly recommended) to download critical pieces of information from the system. In this example, the smartdirector is running **version 4.3.2** of the software. These steps will illustrate what a user should do before upgrading the software on the appliance. We are assuming the newer **4.5.1 software** image has already been acquired by the user from wtec.

Steps to follow	This is what you will see
<p>Step 1.</p> <p>Login to the smartdirector using admin credentials and click on Admin Tools from the Applications menu.</p>	
<p>Step 2.</p> <p>Under the Cluster Data section, enter in the default admin account credentials and click on Download All button</p> <ul style="list-style-type: none"> This action will download a file called ClusterDataFor_<smartdirector name>(<smartdirector IP>)_XXXXXXXXXXXXX.tgz. It is a compressed file with key pieces of information. <p>Download the Site Inventory Data as</p>	

well from the smartdirector

- The link for **Engines** will download a file called **engines.csv**
- The link for **Fixtures** will download a file called **fixture.csv**

UPGRADING SOFTWARE ON THE SMARTDIRECTOR

After the important pieces of information have been gathered, a user can now proceed with upgrading the smartdirector to newer 4.5.1 release.

Steps to follow	This is what you will see
<p>Step 1.</p> <p>Click on Software Update from the Applications menu.</p>	
<p>Step 2.</p> <p>The Software Update page will appear. In this example, it shows that Partition A (active partition) is running software version 4.3.2.</p> <p><i>Note: Software upload and upgrades are only allowed in inactive partitions. In this example, it is Partition B.</i></p> <p>Click on Choose file and select the 4.5.1 software image for the smartdirector that was provided to you by wtec.</p> <p>Next, hit the Upload button.</p>	
<p>Step 3.</p> <p>A prompt will appear which will take an input from the user to proceed with the upload operation.</p> <p>Hit the OK button.</p>	

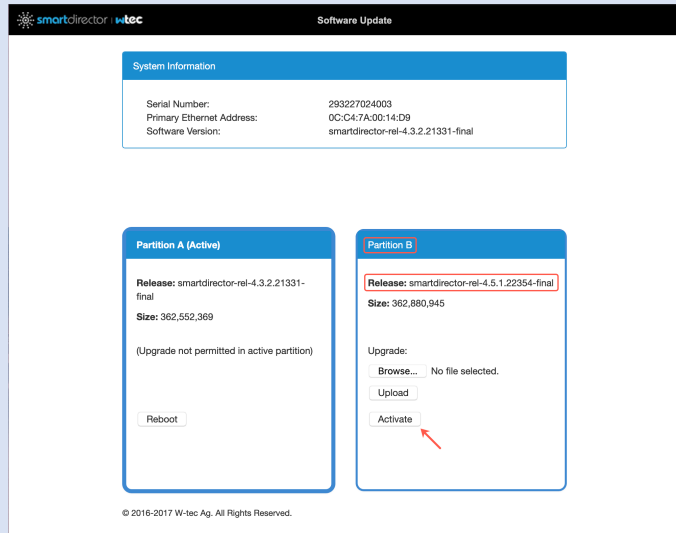

The Upload process will begin, and a progress bar will appear.

Step 4.

Upon completion of the upload, Partition B will show the 4.5.1 software release for the smartdirector.

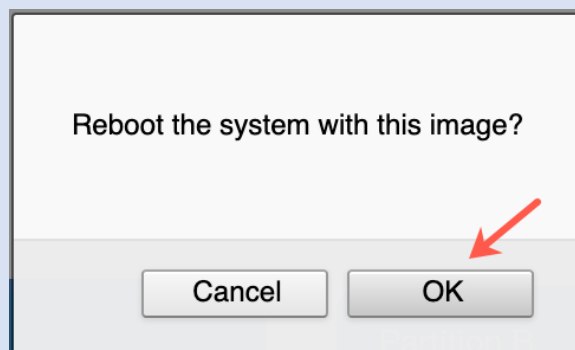

Click on the **Activate** button.

Step 5.

A prompt will appear requesting acknowledgement to **Reboot** the system with this image.

Press **OK** to proceed.

The smartdirector will proceed booting up with the 4.5.1 software image. Give it a couple of minutes while the system reboots. **Note: Do not power cycle the smartDirector.** Once HTTPS access is restored again, the user can try accessing the UI @ <https://<IP Address of smartDirector>>.

If the user hovers over the “i” icon on the top right corner or clicks on it, a verification of the newer software 4.3.2 will be revealed.

At this point the smartdirector software upgrade is now complete.
