PRE-REQUISITES	3
RESTORING CONFIGURATION ON SMARTAPPLIANCES	4

INTRODUCTION

The smartManagement software allows a user an easy way to restore configuration information on the appliances.

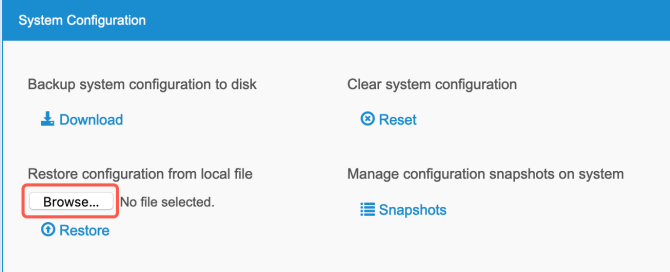

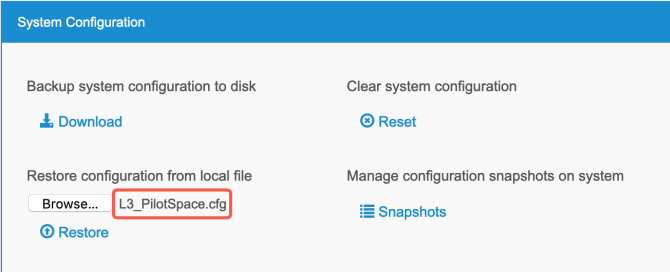

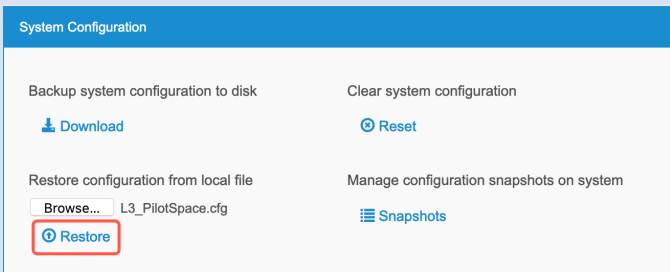

PRE-REQUISITES

Prior to performing any restoration of configuration information, it is highly recommended to backup/download the existing configuration file from the appliances. The process remains the same for the smartdirector as well as the smartengine.

Steps to follow	This is what you will see
<p>Step 1.</p> <p>Login to the smartappliances using admin credentials and click on Admin Tools from the Applications menu.</p>	
<p>Step 2.</p> <p>Under the System Configuration section, click on Download link</p> <ul style="list-style-type: none"> This action will download the existing configuration file (.cfg) on to your PC. 	

RESTORING CONFIGURATION ON SMARTAPPLIANCES

After the existing configuration file has been backed up, a user can proceed with restoring the desired configuration file. In this example, we are restoring a configuration file that is currently residing on the user's PC.

Steps to follow	This is what you will see
<p>Step 1.</p> <p>Under the same System Configuration section, click on the Browse... button, and select the desired configuration file (.cfg file) to be restored from your PC.</p>	
<p>Step 2.</p> <p>You will see the desired configuration file to be restored appear. In this example the name of the file is L3_PilotSpace.cfg.</p>	
<p>Step 3.</p> <p>Next, click on the Restore button to initiate the process.</p>	
<p>Step 4.</p> <p>A dialog box will appear, prompting the user to take action. If the new configuration includes any network/time changes, then a reboot is required. Click on the reboot link.</p> <p>The appliance will reboot and load up the desired configuration file.</p>
